

USE OF AGENTS AND CONTROL DOCUMENTS TO UPDATE A DATABASE STRUCTURE

Abstract of the Disclosure

A method and system for updating a database structure. The database structure includes a
5 dynamically changing list of control documents. A control document specifies tasks to be
performed on the database structure. An agent finds an approved control document on the list
such as by looking into a view of control documents. Processing the approved control document
includes causing an execution of at least one task on the approved control document. Execution
of a such task includes updating of the database structure, and may be implemented by the agent
10 that found the control document or by another agent called by the agent.
